Followed by The Dispersal From

G Jones, Tir Bach Pwllheli

35 MRI, Monty & Fleckvieh Cows

Herd average is 6000 litres , 4.26 fat, 3.53 Protein Cells – 187

Note From Vendor

On a very simple system, with big bale silage, fed in the parlour to a max of 10kg, no maize or diet feeder.

The Cows have been bred to be hardy on the llyn peninsula and our milk buyer south Caernarfon creameries encourages crossbreds for cheese production. Started with crossing with montbeliarde, then bought and MRI bull and still using montbeliarde semen, and recently fleckvieh. Getting good prices for the barrens and the calves.

We are Selling up due to a family disputes & the tenanted farm needs a lot of investment.

The other breed crosses were sold during the summer months, with the intention of keeping a flying herd of 100 monty's and to do most of the work myself with a bit of a helping hand.

I have passion for dairy cows and I am sadend to let them go and It's been a very difficult decision.

The Cows have great Potential and I hope that they go on to do well in their new homes and I have every confidence that they will

Good luck to you all.
